

## International Dart Rules Committee

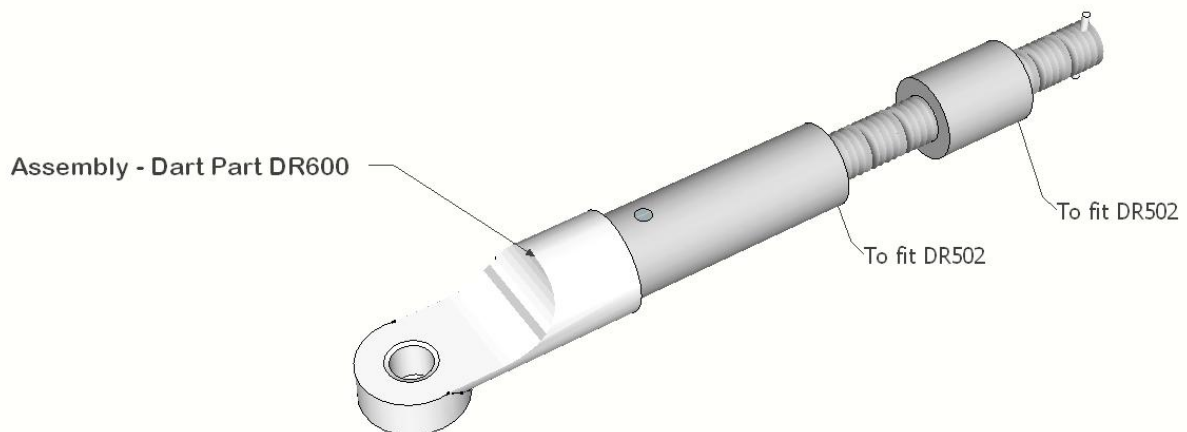

### 9<sup>th</sup> May 2011 Tiller Bar Adjustable End.

#### Reasons for the addition.

1. Tiller connecting bar tube comes in fixed length from the manufactures at 5m lengths. This means the Licensee can only get 2 connector bars from one length whereas with the addition of an adjustable fitting 3 lengths can come from a 5m piece thus reducing costs.
2. There is now a bit more variation in tillers and bars that means rudder alignment is extremely difficult to achieve without major surgery.

#### The Addition.

An adjustable fitting has been devised to facilitate the alignment of rudders and has been approved by the IDRC under rule 6 of the Constitution.

#### Approved by the IDRC

Nicolette van Gorp – for the IDA  
Ian Fraser – for Bryher Mouldings Ltd.  
Stuart Snell – independent member.
